

Here's the latest on Senva's

## ***RECYCLING INITIATIVE***

We've been tracking our recycling efforts to ensure we are minimizing the amount of materials we send to the landfill. Our production facility runs at a very efficient rate, but there is always by-product that needs to be disposed of properly.

Senva has been tracking our recycling since November 2013. Since then, we recycled over 1500 lbs of by-product. We are very proud of our efforts to not only recycle whenever possible, but also to track and report our results publicly. Here is a list of the materials we recycle:

### Recycled Materials

- Glass
- Plastic
- Packaging
- Cardboard
- Paper
- Metal
- Brass
- Copper
- Nylon Tubing
- Silicon
- Scrap Boards
- Printer Cartridges

As of January 2nd, 2014 Senva will also team with Excel Technologies Inc (ETI) to use plastic transport reusable containers for board kits we send to ETI and the finished boards that are sent back to the Senva facility. This will result in a waste reduction of all cardboard shipped to and from ETI.
