

ECMset ECM (Brushless motor) Current Switch

Tool-free adjustable trip-point as low as 0.25A

Prevent false stand-by current trips

No panel programming required

DESCRIPTION

ECMSet™ is designed for no/go run detection on electronically commutated motors (ECMs). ECMs draw a small amount of AC standby current to power their inverter, up to 1A, even when the motor isn't running. The ECMSet features a high resolution adjustable turn-on setpoint to ignore standby current, preventing false ON status indications.

APPLICATIONS

- No/go run detection for EC motors
- On set-point prevents false trips due to EC inverter stand-by current
- Great for data center current switch sensing

Turn-on setpoint minimizes false trips due to standby ECM inverter draw.

Optional CR command relay for stop/start/status in a single labor saving device.

FEATURES

- Reliable operation on ECM motors
- Set trip point with easily scaled dial to that sensor only turns on when motor is actually running
- Super low turn-on adjustment scale Maintenance-free—no call backs
- No hazardous guesswork. Multi-turn adjustments are a thing of the past
- Reduce the risk of arc flash; sensor can be set without calibration in live enclosure
- Industry leading 7 year warranty
- Looking for something smaller? Or a lower turn-on current? Check out the Pro version: [ECMSet Pro](#)
